### Directive 2011/65/EC (RoHS II)

Dear Sir or Madame,

For us, it goes without saying that, where production is concerned, all statutory requirements for occupational safety and health and for environmental protection are complied with. Our products are so made that, according to the current state of knowledge, they cause no health risks to the user and no damage to the environment, if used in the intended manner.

Generally speaking fuses are components and do not fall into one of the 10 product categories covered by the RoHS Directive. Thus they are not subject of the formal requirements of Directive 2011/65/EC.

In addition, we hereby assure you that all SIBA products from the field miniature and sub-miniature fuses comply with the substance bans of the currently valid RoHS Directive (including 2015/863/EU).

All information was given to the best of our knowledge and belief. It reflects the current state of the art. We hope to have answered your inquiry to your satisfaction. For any further questions you may have, we readily are at your disposal.

Yours faithfully

SIBA GmbH

  
Thomas Kubiak
